

Monday: Review

weekend: video on new material (contraction deletion)  
but worksheet later

Exam Thursday - opens around classtime as a  
Sakai assignment, due ... Monday?  
~1 hour long (I hope)

Open book - open note - closed internet.

---

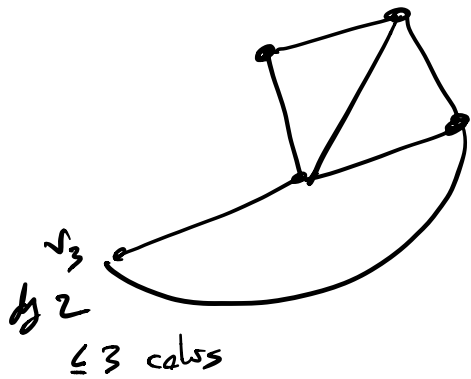

Comment about "Smarter algorithm"

note: some vertex has  $dy 2$   
at end, won't need more than  
3 colors to color it in.

$G$   
if one vertex, color it else  
choose vertex of  
minimum degree

delete it, color  
remay graph.  
after color remay  
graph, add vertex  
back in, and color  
it

divisibility by 3 → sum digits

2 → check last digit

9 → sum digits

5 → check last digit

11 → add up every other digit  
then subtract the ones  
you skipped.

143

1+3-4

4 → check last 2 digits

7 → last digit + 3 times 10's place  
- 2 times 100's place

take 5 times last digit, and add it  
to "other digits"

$$147 \rightsquigarrow 14 + (5 \times 7) = 49 \checkmark$$

$$2342 \rightsquigarrow 234 + (5 \times 2) = 244 \rightsquigarrow$$
$$24 + (5 \times 4)$$
$$= 44 \times$$

24728 div by 11?

$$(2+7+8) - (4+2) = 17 - 6 = 11 \checkmark$$
