

Vertex Identification

G a graph, $v, w \in V(G)$

G/vw = graph G with v, w identified

Def G/vw graph at vertex set

$$V(G/vw) = (V(G) \setminus \{v, w\}) \cup \{vw\}$$

if $x, y \in V(G)$, $x, y \neq v$ or w

in G/vw x & y are adjacent \Leftrightarrow

they're adjacent in G

if $z \in V(G) \setminus \{v, w\}$

z adj to vw in G/vw \Leftrightarrow z adj to v or w in G
